Purpose. These are the standard transaction-level terms offered by RVJ Premium Garments Private Limited ("RVJ" or "Buyer App") to the seller-side Network Participant ("Seller App") for eligible transactions initiated through the RVJ Buyer App on the ONDC Network. They address allocation of duties between the two Network Participants. They are not the customer-facing terms for RVJ's own separate merchandise store.

1. Scope, formation and order of terms

For an individual order, these terms apply when the parties include or refer to the published static-terms URL in their ONDC transaction and complete the applicable transaction confirmation. The agreed protocol payloads for that order (the "Transaction Record"), including product, price, payment, fulfillment, cancellation, return, refund and settlement attributes, form part of its transaction-level arrangement.

Mandatory applicable law and ONDC Network Policy prevail. For transaction-specific commercial variables, the mutually exchanged and accepted Transaction Record prevails over a conflicting general statement here. A new version of these static terms does not retrospectively change already confirmed orders. No clause creates an obligation for a Seller App that has not participated in and accepted a transaction.

2. Roles and transaction records

The Seller App is responsible for the accuracy of the seller and item information it supplies, product availability, lawful listing, taxes and invoices within its role, and arranging or coordinating the fulfillment identified in the Transaction Record. The Buyer App displays Seller App data, conveys the buyer's order and consent, sends and receives protocol messages, and handles buyer communications and grievances within its role.

Each party will keep sufficient dated records of the accepted quote, order confirmation, status changes, payment and refund references, consent where required, and issue resolutions to support reconciliation and investigation. Neither party is authorised by these terms to represent that it is the agent or legal representative of the other.

3. Order formation and fulfillment

A search or selection response is informational until an order is confirmed in the protocol. The Seller App must honour the confirmed item, quantity, charges, delivery commitments and any stated restrictions, subject to valid later changes accepted through the applicable protocol flow. The Buyer App must present the accepted order details to the buyer and relay changes accurately. Substitutions and additional charges require the consent and protocol treatment applicable to the order.

The party responsible for the fulfillment or logistics service in the Transaction Record must provide accurate tracking, delivery attempts and proof relevant to that service. Changes to an agreed order should be represented through the supported order update, cancellation or issue processes and should be reconcilable to the same order ID.

4. Cancellation before dispatch

The Buyer App may send a buyer-initiated cancellation request through the prescribed protocol flow. Item cancelability, the current fulfillment stage, disclosed cancellation charges, reason code, seller response and applicable law determine the outcome. The Seller App should communicate the acceptance or valid rejection and resulting order state without delay. Cancellation charges may be applied only if disclosed in the Transaction Record and otherwise permitted by applicable law; no general percentage or penalty is created by this document.

When a cancellation is accepted, the parties will reconcile the item, shipping and other components of the agreed order amount and process any buyer refund according to section 6 and the applicable payment arrangement.

5. Cancellation after dispatch, RTO and delivery failure

A request after dispatch requires coordination with the Seller App and the responsible logistics provider. A delivery refusal, failed delivery or return-to-origin (RTO) event does not by itself establish fault or a fixed fee. The parties will use the recorded fulfillment events, agreed delivery window, reason for failure, disclosed logistics terms and applicable law to determine the order adjustment, any return movement and the responsible cost bearer.

If delivery is materially delayed, missing or incorrectly marked complete, the parties will investigate the relevant status and proof. Any customer remedy or inter-party adjustment will follow the confirmed order terms, documented facts, ONDC grievance process and applicable law. A unilateral post-dispatch cancellation request does not itself constitute the Seller App's acceptance.

6. Returns, replacements and buyer refunds

Return or replacement eligibility, request window, reverse pickup, quality check and any exceptions are as disclosed for the item or order and required by applicable law. The Buyer App relays the buyer's request and evidence. The Seller App communicates the decision, reason and available resolution through the applicable return or IGM process, and coordinates pickup or replacement where it is responsible.

For an approved refund, the parties will agree and record the refundable item amount, taxes, shipping or other components, any permitted deduction, who must fund it, and the payment route. The party that collected or controls the buyer payment is responsible for initiating the resulting customer refund using the authorised payment method and supplying a traceable refund reference. The other party must fund or release its agreed share through the applicable settlement mechanism. Refund initiation and completion dates will follow the agreed payment and resolution record, applicable payment-channel rules and law; this document promises no unverified fixed number of days.

A resolution chosen independently by one party beyond the resolution agreed with the other party does not automatically charge its additional cost to the other party. Product defects, wrong items, missing items, non-delivery and incorrect delivery records will be investigated on their merits; nothing here limits a buyer's mandatory statutory rights.

7. Issues, grievances and escalation (IGM)

The Buyer App will create and relay a buyer issue with its order/item/fulfillment references, category, description, supporting evidence where supplied, current status and expected response/resolution time where applicable. The Seller App will acknowledge and investigate issues within applicable ONDC requirements and the times agreed or recorded for that issue, ask for necessary further information and send a reasoned resolution or status update.

For a refund, replacement or other proposed resolution, the parties will preserve the proposal, buyer response and resulting action history. A resolved issue may be closed after the applicable confirmation and protocol action; a disputed or unanswered issue may be escalated through IGM or other available network channels. Neither an issue status nor a missed response clock alone authorises an unrecorded payout deduction. The parties will cooperate to correct incorrect callbacks or order states and maintain an auditable issue history.

8. Payment collection, buyer finder fee and payout

The Transaction Record determines which party collects payment from the buyer, the total amount and components, payment status, any buyer-app finder fee type and amount, settlement beneficiary and agreed payout details. A finder fee is payable only if disclosed and agreed for that transaction; no blanket percentage is imposed in these static terms. The agreed fee should be identifiable against the order ID and supported by an appropriate invoice and tax treatment.

The collecting party will account for collected money, valid refunds, chargebacks, agreed fees, shipping adjustments and applicable taxes, and transfer the net amount owed to the beneficiary in the agreed settlement window and channel. The parties will share order and payment references and reconcile failed or duplicate transfers. An amount in dispute will be documented and resolved through reconciliation or the agreed issue process; neither party gains a general right to retain undisputed funds indefinitely.

Each party is responsible for its own tax compliance. Any GST, tax collection or tax deduction at source, or statutory withholding, will be applied only as required by current law and supported by records and certificates where applicable. No bank details or payout account number are published in this document.

9. Information security and privacy

Each party will process buyer, seller and order data only as needed to perform and support the transaction, satisfy legal obligations, handle disputes and protect against abuse, in accordance with applicable Indian law and ONDC Network Policy. Access must be limited to authorised persons, with appropriate security and retention controls. Each party will promptly notify the other through an appropriate channel when a material incident involving shared transaction data requires coordinated action. A party may not use data received from the other for unrelated marketing without a lawful basis.

10. Responsibility, claims and exceptional events

Each party is responsible for its own acts, omissions, personnel, technical systems and third parties engaged by it, including the accuracy of information it supplies and services it undertakes. Where a third-party claim arises directly from a party's proven breach of these terms, applicable law or agreed transaction duty, that party will cooperate in the defence and bear the attributable loss to the extent permitted by law. Fault, causation, available records and the applicable transaction terms will be considered before an inter-party charge is made.

A party affected by an event beyond its reasonable control, including a network-wide outage or natural disaster, will notify the other promptly, mitigate the effect and resume performance when practicable. Amounts already due, completed refunds and duties to protect data or preserve transaction records are not erased solely because of the event.

11. Resolution of inter-party disputes and changes

The parties will first seek to resolve a transaction dispute using the order and settlement evidence, the IGM process when relevant, and good-faith discussion between their nominated contacts. If unresolved, the parties may use the applicable ONDC Network Policy mechanisms and the remedies available under Indian law. These terms do not designate a court, arbitral seat or exclusive forum that the parties have not otherwise agreed.

RVJ may publish a later numbered version at a new versioned repository path. The version referred to for a confirmed order remains identifiable and available for that order. If a clause is unenforceable, the remaining terms continue to the extent law permits.
